

Health and Safety Inspections

Businesses are required to have suitable and sufficient arrangements in place that secures the health and safety of all who may be affected by their works. Health and Safety inspections are a great way of demonstrating that you are monitoring your activities and that your business remains compliant. Our approach to inspections is proactive and inclusive inspections, using data to drive improvements.

As an owner of a construction business, I know the risks my people face on a day to day basis. It is my responsibility to know that what we have set out in our safe system of work (SSOW) is being implemented consistently across all my sites, and that the working conditions are up to standard so that works can be carried out without any adverse effects to people's health or safety. The H&S inspections carried out by the C2C Group give me a clear picture of my legal compliance and help identify trends that need my attention.

Marin Gazulli, MGB Contractors

Our Service

Every employer has a duty of care to ensure the Health and Safety of their employees and anyone that may be affected by their operations. To help you comply with the law, HSE encourages a common-sense and practical approach to managing health and safety that follows the Plan, Do, Check and Act cycle INDG275(rev1).

The law goes further on a construction sites, as the health and safety risks you face every day are higher. It is your responsibility, whether you are the client, principal contractor, or contractor to ensure that the projects are undertaken safely.

The Construction and Design Management Regulations state that you must plan, manage, and monitor the site and the associated works, Health and Safety Inspections are a way of ensuring that you are adhering to this.

At C2C Group, our approach to Health and Safety Inspections is proactive and inclusive, we will work with you to create a positive health and safety culture. We believe that if people know you care about them and their safety, they are more engaged and responsive to feedback.

Our Health and Safety inspections include:

- A site walk around to spot the hazards
- A desktop review of the compliance documentation
- Engagement of the operatives about their work and the risk associated with it and seek their feedback and suggestions on how to improve.
- Discussions with the project teams to gain an understanding of the work activities, project plans and constraints
- The identification of Health and Safety or Environmental issues.
- Advise on how to maintain or improve the required Health and Safety standards.
- A formal record of the inspection on the agreed template that is communicated to the wider project team to ensure that the findings of the report are understood and actionable.

C2C Group are here to help, we have experienced Health and Safety professionals with over 20 years of experience who have operated on both the Compliance and Operations side of our industry.

If required, we can also carry out:

- Review or production of Risk Assessment, Method Statements or SSOW's
- Accident/Incident Investigations
- Review of preconstruction information
- Production of construction phase plans
- H&S training

Our expert Health and Safety professionals are on hand and waiting your call, do not delay, we are ready to connect with you and get to understand your needs.

Get clarity and build confidence in your team.
